## **BOOK SYNOPSIS**

A narrative history of one of IBMs most illustrious and secretive organizations -- IBMs Federal Systems Division -- that protected America, helped NASA put men on the moon, and spawned such technology as todays Internet, ATM transactions, ebay operations and online banking. Included in the book are space-age computer and weapons systems details never before shown to the public. Federal Systems developed such things as a dispatch system for New York Citys police force, international banking systems in the UK, Japan and other countries, and a special operations system for the New York Stock Exchange. This is the first book ever written about this semi-clandestine organization operating under the IBM umbrella that supported NASAs projects from Project Mercury to Space Shuttles and Skylab. Federal Systems was also a major part of the development of modern weapons technology. Each chapter of the book focuses on one aspect of Federal Systems 50-year history of service to the government. The organization changed hands during an IBM selloff in the early 1990s to Loral Corporation, which in turn sold it to Lockheed Martin in 1996.
